Atlanta, GA

EDUCATION

Georgia Institute of Technology

Atlanta, GA

Bachelor of Science in Computer Science, GPA: 3.66

July 2024 – Dec. 2027 (Expected)

Relevant Coursework: Data Structures & Algorithms, Computer Org. & Programming, Linear Algebra, UI Design

EXPERIENCE

Refresh Health - Software Engineering Intern

June 2026 – Present

Atlanta, GA

- Architected and built a real-time presence-detection system from scratch for an AI-native EHR, designing an event-driven pipeline with an MQTT broker for ingestion, a presence cache for low-latency state lookups, a FastAPI backend, and PostgreSQL for durable event persistence.
- Achieved sub-1-second end-to-end detection latency for presence-driven prompting by optimizing the cache/persistence layer split, and built React components for IoT device management and real-time patient presence data across the EHR UI.
- Owned networking and deployment architecture, designing around an existing containerized (AWS Fargate) service architecture and standing up a Tailscale-based tailnet for secure remote access, then pitched infrastructure trade-offs to leadership ahead of a customer demo.

Georgia Tech Propulsive Landers - Avionics & GNC

Aug. 2024 – May 2025

Atlanta, GA

- Implemented EKF-based sensor fusion in C++ for real-time UAV state estimation in closed-loop flight control.
- Developed and benchmarked multi-sensor fusion pipelines in Python (IMU, altimeter, GPS), improving filtering accuracy and signal stability.

Southern Tea - Engineering Intern

May 2023 – Jan. 2024

Marietta, GA

- Identified and resolved a \$300K valuation error by tracing system dataflows and auditing validation logic in ERP system, correcting a misconfiguration in the inventory-management software workflow.
- Produced audit and process reports on a 3rd party automation pipeline audit, and presented to the Head of Engineering to inform plant-floor upgrades.

PROJECTS

Nila IoT & Facility Management - Lead Developer | *React, Firebase, MQTT*

Oct. 2025 – Dec. 2025

- Built an MVP for IoT-enabled facility management with real-time device-state syncing and remote monitoring.
- Designed scalable Firestore data models and built an AI-powered floorplan-scanning pipeline to automate customer onboarding, improving speed from beta version by 30%.

ATL Food Finder & Spotify Stats - Full-Stack Dev. | *Python, Django REST, Next.js*

Aug. 2024 – Oct. 2024

- Built two full-stack apps (Django REST backends, Next.js/Tailwind frontends) integrating the Google Places, Spotify, and Gemini APIs, with optimized query handling for real-time data retrieval.
- Led a 5-person team as Scrum Master, coordinating sprints with Kanban and XP practices.

Project OysterPod - Founder | *Linux, Bash*

May 2023 – May 2024

- Configured offline-first Linux environments with the Kolibri LMS and deployed 40+ laptops across Metro Atlanta and rural India, enabling educational-software access without internet dependency.
- Wrote automated OS-flashing and package-provisioning scripts, reducing per-device setup time by 60%.

NYU Tandon - Machine Learning Researcher | *TensorFlow, Scikit-Learn*

July 2023 – Aug. 2023

- Trained and tuned ML models including random forests, CNNs, and YOLO-v3, reaching 95% test accuracy (top score in a 50+ student cohort) and improving detection accuracy by 20% through hyperparameter tuning and batched preprocessing.

TECHNICAL SKILLS

Languages: Python, Java, C++, JavaScript/TypeScript, SQL

Frameworks & Tools: React, Next.js, Django REST, FastAPI, Node.js, PostgreSQL, MQTT, Firebase, TailwindCSS, Git, CI/CD, Cloud Functions, Linux

ML/AI: TensorFlow/Keras, Scikit-Learn; CNNs, DNNs, classical ML, data pipelines

Concepts: Data Structures & Algorithms, OOP, REST APIs, Agile/Scrum, Distributed Systems, Data Analysis
